

# Pittsburgh Regional Transit Utilization

Eric Laslo  
ERL67@pitt.edu

## Legend

- The outer circle denotes the month, going clockwise from Jan 2017 to Oct 2024
- Each large pie slice (alternating gray and white) represents the entire year
- The small radial lines represent a month
- The length of the bar is the total monthly ridership
- Each bar is divided into the individual routes by color
- The segment size of each bar is the total ridership on that route for that month
- The bar color groupings generally align with the various routes and make it easier to see
- The radius of the circle denotes the total ridership in intervals of 100,000, going to a maximum of 500,000
- The thick black line on the 20-03 radii indicates the start of the Covid-19 pandemic

## Findings

- The graph shows how much the ridership dropped during the pandemic, starting March 2020.
- The graph also shows how the ridership has only recovered to approximately 65% of pre-pandemic levels.
- Also of note is that ridership peaks each year around August and September, which correlates with the start of the school year.
- Could be useful when analyzing bus route realignment and prioritizing certain routes.
